Soybean Spray Program

Atuva Seed inoculation, 50ml/ 50kg	Dual Magnum Pre-Em against grasses and broadleaf Rate 100ml/ Knapsack
Flex Post-Em Broadleaf Rate 100ml/ Knapsack	Fusilade Forte Post-Em against grasses Rate 100ml/ Knapsack
	Amistar Top Excellent against rust and other diseases Rate 30ml/ knapsack

Touchdown 3400SE Pre Plant Burn Down Rate 240g/ knapsack	10-20	Denim Fit Kill leaf feeders (worms) thrips Rate 10g/ knapsack	OR	Ampligo Kills chewing and sucking pests Rate 16ml/ sprayer
				Actellic 500ML Controls all major weevils, beetles and moths rate 50g/ 100kg of grain

Protecting yield potential

Protecting yield, quality and GLA

**A GOOD FARMER
KNOWS...
THE SEED THAT YIELDS!**

Inoculation in Soyabean

- Inoculants are live products (Rhizobium Strains)
- Inoculation is important for Biological Nitrogen Fixation. It also promotes plant health, root development, enhanced nutrient uptake and disease

Storage of inoculant

- Store in a cool dark place
- Store away from pesticides
- Do not mix with agrochemicals on the seed.
- First treat chemicals with seed and allow to dry
- Thereafter mix microbiological inoculants on treated seed and allow to dry.
- Do not use after expiry date

Process of inoculation

- Spread out a clean plastic sheet and put out a half-drum in the shade (not in direct sunlight or the bacteria might die).
- Read the label of your inoculant for dosage
- Wet the seed thoroughly and there after add inoculant and mix thoroughly to ensure uni form coating.
- Spread the seeds out over the sheet and allow to dry before planting the same day.

DINA

- Yield of 4.5MT/ha (90 x 50Kg) • Maturity in 102 days
- Good Tolerance to shattering
- Good Tolerance to Acidic soils • High Protein and Oil Content

The Synergy soya spray program is designed to maximize your soya bean yield by protecting your crop at every stage of growth and post harvest.
